Module – 2(Fundamentals of Python)

Q.4	**How memory is managed in Python?** ➢ Python memory is managed by Python private heap space. All Python objects and data structures are located in a private heap. The programme does not have an access to this private heap and interpreter takes care of this Python private heap.
Q.5	**What is the purpose continue statement in python?** ➢ The continue keyword is used to end the current iteration in a for loop (or a while loop), and continues to the next iteration.
Q.14	**What are negative indexes and why are they used?** ➢ Negative indices are powers (also called exponents) with a minus sign in front of them .used to in Python to begin slicing from the end of the string i.e. the last.
